### Finite Math Chapter 1 Review.avi

These give the two solutions to  $f(x) = 4$ :  $x = -1$  or  $x = 3$ . This means  $f(-1) = 4$  and  $f(3) = 4$ , or when the input is  $-1$  or  $3$ , the output is  $4$ . Notice that while the graph in the previous example is a function, getting two input values for the output value of  $4$  shows us that this function is not one-to-one.
