Near-Miss Incident Management in the Chemical Process Industry

Near-misses should be easy to report. Management needs to establish a culture that stresses the importance of identifying and controlling hazards. Employees should not fear punishment when reporting near-misses. Near-misses should be investigated to determine why the event happened and how its recurrence can be prevented.

The Importance of Reporting Near Misses | Markel Specialty

Near-Miss Management (NMM) provides one-of-its-kind enterprise risk detection and advanced warning platform for the process industries. Described as disruptive innovation by our customers, NMM products are transforming how risks are managed in industrial operations.

Near Miss Examples in the Workplace

The final phase of near miss management is monitoring the changes made to ensure that they effectively address the causes of the near miss incident. In addition, remedying one problem can sometimes create other unforeseen hazards, particularly for subtle changes.

Near Miss Reporting | How to Report Near Miss Incidents

A near miss is an event that could have been a workplace accident had things played out differently. Near miss reporting

isn't required by federal OSHA but it is a common safety management practice. Keep a record of—and respond to—close call events to reduce the likelihood an injury or illness will occur.

Dynamic Risk Analyzer™ - Risk ... - Near-Miss Management

If something is repeatedly reported as a near miss, the committee will begin to look deeper into the problem to get at its root. Management needs to involve employees as part of the safety management committee, as well as in the implementation of changes. Feedback then needs to be sought regarding how these changes worked.

Develop a near-miss management team ; To design a company near-miss system. To provide training for employees and management. - To monitor system performance.

30 Near Miss Examples to Improve Your Reports | Safety ...

A near miss is an unintentional incident that could have caused damage, injury or death but was narrowly avoided. In the context of safety, a near miss may be attributed to human error, or might be a result of faulty safety systems or processes in an organization. A near miss may also be called a close call, near collision or near hit.

(PDF) The Near-Miss Management of Operational Risk

Near miss reporting is the only recognized incident management structure that accurately identifies and reports near misses, effectively communicates risk tolerance measures to employees, eradicates the root cause of the hazard and prevents future accidents or injuries from taking place. Goals of a near miss reporting system:

Near-Miss Management | LinkedIn

Near-miss programs improve corporate environmental, health, and safety (EHS) performance through the identification and management of near misses. Based on more than 100 interviews at 20 chemical and pharmaceutical facilities, a seven-stage framework has been developed and is presented herein.

Workplan: Near Miss Reporting Management | SafetyNow ILT

A “near miss” is an unplanned event that did not result in injury, illness, or damage - but had the potential to do so. Sometimes called a “near hit” or “close call” - signals a system weakness that, if not corrected, could lead to significant consequences in the future. PPT-041-01

Reporting near misses also helps shift the conversation from “the blame game” to “lessons learned”, which translates to an overall positive work environment. (Note : One way to reinforce this idea is to use near miss reporting software that allows anonymous reporting.)

What is a Near Miss? - Definition from safeopedia

Unlike a near miss, an accident is a type of incident that does cause an employee injury or illness, or property damage. Because near misses don't have serious effects, they can go unreported in some workplaces. But a near miss is an accident that's waiting to happen.

Near-Miss Management

"Near misses" can be defined as minor accidents or close calls that have the potential for property loss or injury. A near miss will prevent a task from being completed as planned. Most accidents can be predicted by close calls. These are accidents that almost happened or possibly did happen but simply didn't result in an injury this time around.
